#### Keep Vehicles Moving With TransCore's Cash-Free, Card-Free, And Hands-Free Systems

Parking facility owners and operators strive to keep their facilities safe, their customers happy, and the books balanced. TransCore, the market leader in automatic vehicle identifications (AVI) solutions, uses time-proven radio frequency identification (RFID) technology to enhance parking operations efficiency. With a wide variety of parking options and numerous facilities, vehicle access payment and revenue control are extremely important to municipalities. Whether you offer hourly, daily or monthly programs, parking administration is easily managed, supported by accurate entry and departure times and locations.

TransCore's AVI components interface with existing back-office operations. Our comprehensive solutions provide reliable and accurate entry and exit records for security, parking, and usage fees, allowing a high degree of automation and, importantly offer many customer benefits. These benefits are well recognized and appreciated by your customers and will attract new patrons.

## Speed And Throughput Advantages For Customers

Facility access is speedy, proceeding through entries and exits with limited distractions. This improves traffic flow during peak hours and reduces aggravating wait times at both ends of the business day, whether arriving for work or departing for home.

## Convenience That Customers Appreciate

Hands-free operations are convenient, attracting new customers by minimizing hassles, waiting time, and driver distractions. Customers don't have to fumble for cash, swipe or wave an access card, or punch a keypad to gain access. Additionally, windshield-mounted or vehicle-mounted tags mean no lost cards or tickets.

## Security Is Increasingly Important

Utilizing TransCore's technology, parking patrons don't have to roll down the window to pay for parking, swipe a card, or pull a ticket. This hands-free solution increases their personal security and can also protect them from inclement weather.

## Sustainability Means Positive Impact On The Environment

Wireless RFID technology used for parking allows vehicles to enter and exit parking garages virtually without stopping, minimizing backups. This results in reduced idle times (estimated 25-30 percent) and significantly decreases carbon emission output.

## Interoperability

In locations where electronic toll collection is available, TransCore's multiprotocol readers enable regional interoperability. The same tag that is used on toll roads may be used in a variety of different applications including access control to private communities.

## Technology To Improve Your Business

As the transportation RFID pioneer, TransCore has deployed more than 46.3 million tags and 67,000 readers in transportation applications worldwide. TransCore's time-tested AVI solutions improve the way parking owners and operators do business. Benefits include increasing customer's speed and convenience, while improving security. In a fast-paced world, it's essential to keep traffic moving quickly and efficiently.

TransCore's parking and access products may be purchased through an international network of authorized dealers and distributors trained and supported by TransCore.
