## Parking & Access Control

### Environmental Benefits

#### TransCore's Battery-Free Tags

- ▶ Consume less petroleum-based raw material to manufacture
- ▶ Reduce transportation and shipping requirements
- ▶ Eliminate the additional cost and demand for batteries and subsequent storage and disposal requirements

#### The Green Calculator

- ▶ Computes the impact of your facility on the environment
- ▶ Provides the positive impact of TransCore's AVI solution
- ▶ Visit our website: [transcore.com/carboncalculator](http://transcore.com/carboncalculator)

### Keep Vehicles Moving With TransCore's Cash-Free, Card-Free and Hands-Free Systems

TransCore, the market leader in automatic vehicle identifications (AVI) solutions, uses time-proven radio frequency identification (RFID) technology to increase security and convenience for your employees' parking, while improving throughput, and enhancing operational efficiency.

#### Speed And Throughput Advantages For Employees

Parking facility access is speedy, with employees proceeding through entries and exits with limited distractions. This improves traffic flow during peak hours and reduces aggravating wait times at both ends of the business day, whether arriving for work or departing for home.

#### Convenience That Employees Appreciate

Hands-free operations are convenient and minimize hassles, waiting time, and driver distractions. Employees don't have to fumble for, and swipe or wave an access card,

or punch a keypad to gain access. Additionally, windshield-mounted or vehicle-mounted tags mean no lost cards or tickets.

### Security Is Increasingly Important

Utilizing TransCore's technology, employees don't have to roll down the window, swipe a card, or pull a ticket. This hands-free solution increases their personal security and can also protect them from inclement weather.

### Integration Into Existing Access Control And Facility Management Systems

TransCore's AVI components interface with existing back-office operations. Company parking managers can integrate the RFID data into standard access control and security systems.

### Interoperability

In locations where electronic toll collection is available, TransCore's multiprotocol readers enable regional interoperability. The same tag that is used on toll roads may be used in a variety of different applications including access control to private communities.

### Sustainability Means Positive Impact On The Environment

Wireless RFID technology used for parking access control allows vehicles to enter and exit parking garages virtually without stopping, minimizing backups. The result is reduced idle times (estimated 25-30 percent) and significantly decreased carbon emission output.

### Technology To Improve Your Business

A leader in the transportation industry, as of 2011, TransCore has deployed more than 46.3 million tags and 67,000 readers in transportation applications worldwide. TransCore's time-tested AVI solutions improve the way parking managers operate corporate and business parking facilities. Benefits include increasing employees speed, convenience, and security. In a fast-paced world, it's essential to keep traffic moving quickly, efficiently and securely.

TransCore's parking and access control products may be purchased through an international network of authorized dealers and distributors trained and supported by TransCore.

Call **214.461.6443** or visit **transcore.com** today and learn more about how you can streamline your facility's parking operation to better manage your parking resources, while improving employee security and convenience.

#### RFID-Enabled Hang Tag

- ▶ Toledo Ticket offering (powered by TransCore)
- ▶ Gate access
- ▶ Visual enforcement
- ▶ Special event programs

#### Encompass1i Handheld Reader

- ▶ Multiprotocol portable readers and mobile computer
- ▶ Ideal for exception-based scanning and on-foot patrolling
- ▶ Reduces errors and redundant manual data entry
- ▶ Rugged design withstanding the harshest environments
- ▶ Rechargeable lithium-ion battery pack
