

## **FREIGHT MATCHING. ASSET TRACKING. FLEET COMPLIANCE.**

Every day you are faced with the same challenges: making sure trucks have loads or loads have trucks. And having to know where your trucks or shipments are at any given time – day and night. On top of all that, you've got to ensure that your fleet is in compliance with every federal regulation or risk getting fined. Your approach — juggling multiple relationships with multiple companies. That's pressure. Wouldn't it be ideal if there was one company that could be your partner? One company that would help you manage all of your freight matching, asset tracking, and fleet compliance responsibilities? Relax. There's TransCore.

### **The world's largest freight matching system. Period.**

Only TransCore can put together the world's largest online freight matching community, bringing together loads and trucks throughout the United States and Canada. In fact, our freight matching network posts 220,000 loads daily on average. The information we provide is reliable, effective, and easy to use. You can quickly and simply post and query for either trucks or loads – ensuring you keep moving.

### **An end-to-end tracking solution that works. Promise.**

There is plenty of talk about end-to-end visibility, but the reality has seemed elusive until now.

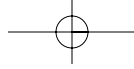

TransCore brings together two powerful technology platforms to provide both fixed and mobile asset visibility – all from your desktop.

Our GlobalWave<sup>®</sup> system utilizes global positioning systems and geostationary satellites to relay mission critical data to help you monitor, manage, and track trailers whether mobile or stationary. Additionally, for in-cab tracking and communications, Linktrak<sup>SM</sup> provides a direct connection between you, your driver and his rig – giving you real time access, all the time.

TransCore's RFID-based asset tracking technology is a system of vehicle-mounted RFID tags and SmartPass<sup>®</sup> readers installed at each terminal location. Information embedded in the tags is captured each time the vehicle passes a reader, providing you with real-time information that can help you improve asset utilization and increase security, productivity, and profitability.

When combined, GlobalWave, Linktrak, and SmartPass systems deliver a true end-to-end visibility solution. We promise.

### **Regulatory and compliance issues. No Problem.**

There is no telling how much time you may spend just trying to meet the required regulatory and compliance guidelines. However, there is a way to get rid of that time-consuming headache. TransCore's new Fleet Compliance Services helps keep countless fleets up and running – leaving you time to manage your fleet operations and maximize your profitability.

Our services include:

- Fuel and mileage tax reporting services
- Registration and permitting services
- Vehicle titling and permitting services
- Driver qualification and compliance services
- Log auditing services

Wouldn't it be nice to know that your regulatory and compliance issues are being handled right the first time?

Can you afford not to?

### **About TransCore.**

TransCore is a leading provider of information technology solutions to operators and users of surface transportation infrastructure in targeted markets within the transportation industry. TransCore's software, services and products are designed to improve efficiencies for its customers, primarily toll road authorities, state departments of transportation, trucking companies and freight brokers.
